

# GIBRALTAR COMPRESSOR STATION

tekbuilds.com

## BACKGROUND

**Location:**

Claysville, PA

**Client:**

TransCanada Corporation

**Type:**

Compressor Station

## TEK SERVICES

Clearing, Site Civil, & Foundations

2,200' of 36" Lateral Pipeline

Equipment Setting

Compressor Assembly

Mechanical Services

Electrical Fabrication & Installation

Commisioning

## PROJECT HIGHLIGHTS

Our turnkey solutions were utilized to take this project from authoring the pre-construction P6 Level schedule, to the impressive greenfield compressor station that stands today. This station supports two Exterran packaged CAT/Ariel 3616 A4 5000 horsepower compressor sets. Beginning with clearing approximately 12 acres of trees and excavating and removing 40k yards of fill, TEK has overseen the construction of 2,200 feet of 36 inch pipe to the compressor station, compressor building erection, concrete foundations, pipe fabrication, electrical assembly and has self-performed all mechanical activities, helical pile installations, and equipment setting without a single safety incident.
